Cooling Tower Water Treatment and the Difference ...

A cooling tower water treatment system is an arrangement of technologies that remove damaging impurities from your cooling tower feed water, circulation water, and/or blowdown. The specific configuration of your system will depend on several things, including: What type of cooling tower you have (open circulating, once-through, or closed loop)

What Is a Cooling Tower Water Treatment System and How ...

To cool a building, the same principle is used. Water is exposed to moving air so that a portion of the water evaporates, which results in cooling the remaining water. The open recirculating loop of the cooling system is comprised of the cooling tower and piping to and from the chiller or heat exchanger.
