## **Tuners - QRPGuys**

While tuned up on 40 meters, I had a quick QSO with a station near Chicago from here in southeastern Pennsylvania with 3 watts. Wrap-Up. This little Z-Match tuner was one of my favorite—and most useful—projects. It's a great accessory for QRP rigs that lack an internal tuner or SWR meter. 73, Craig WB3GCK ©2000-2020 Craig A.

could get the LED indicator to go completely out. On one or two bands, I couldn't get it completely extinguished but it did give a definite null. Double-checking with a second SWR bridge indicated that the SWR was 1.5:1 or less in this condition.

### **A Homebrew Z-Match Tuner**

While browsing around for QRP tuners, the Z-Match caught my attention. The Z-match network was originally described by R. W. Johnson, W6MUR in the July 1954 edition of the QST magazine published by the ARRL. It met my requirements stated above and it was a proven tuner network.

Make antenna really match Time Owned:  
6 to 12 months. I use ZM2 in the field,  
having the more diverse and random  
kinds of antennas, and always can find a  
good match and useful SWR. It made  
miracles using longwires at difficult  
bands like 80m, turning possible QSOs  
with very low power (QRP). I really  
recommend, so I'm buying my second  
unit.
